

AMP Risk Mitigation Suite

An SCAP-validated solution

Automate and Orchestrate Risk Mitigation
Comply with FISMA, FDCC, NIST and other standards.

Key Benefits:

- » Compliance with new FISMA continuous monitoring requirements
- » FISMA, NIST 800-53r3, and Cyberscope assessment & reporting
- » Low cost of ownership
- » Improved risk management
- » Improved security posture
- » Ease of use
- » Real time visibility into your network
- » Identification of managed and unmanaged/rogue networks and devices
- » Network leak detection
- » Situational awareness
- » Improved accuracy

Preventing sensitive information from being sent outside your department or agency has become a top priority for government organizations today. All kinds of sensitive citizen, staff, internal-use, and even classified information related to national security is now just a keystroke from being sent across the Internet whether an employee is on or off the corporate network. Every department and agency is at risk.

The so-called “insider threat” is well documented. According industry analysts, 70 percent of security incidents resulting in data loss are perpetrated by insiders.

Just knowing the risks in your environment is not enough. To avoid significant legal and compliance exposures, you need software specifically designed to address the insider threat. The AMP Risk Mitigation Suite gives you:

- » **Decision Support Portal**—centralized management and reporting
- » **Asset Discovery**—rapidly discovers all networks/assets.
- » **Vulnerability Management** — SCAP based vulnerability reporting
- » **Configuration Auditing & Policy Management** —maintain accurate inventory based on SCAP compliant assessments.
- » **Automated Remediation** — AMP integrates SRAS with Altiris Client Management Suite to automate consistent, predictable, and reportable remediation of discovered risks.

We can help you understand your current state, report on your compliance, and measure your progress towards remediation quickly, easily and continuously.

Remain compliant, improve data security, and create the all-important automated link between the security team and the endpoint team with AMP Risk Mitigation Suite.
